

Use the same cleaning technique as for a conventional manual toothbrush.

Dentists recommend brushing teeth at least 3x a day for two minutes.

The new, practical change system enables the brush head to be exchanged (recommended by dentists: latest after 3 months of use). Cleaning can thus be tailored to individual needs.

### Pro Interdental

- cleans deeply in the interdental spaces
- removes plaque thoroughly from tooth surfaces

### Complete Protection

- highly effective at removing plaque
- protects teeth as well as gums

### YOUNG EDITION

- compact brush head (suitable for children from 3 years)
- even hard to reach areas are cleaned efficiently

# Sonic power

## Pro Interdental

Innovative interdental filaments in combination with high frequency sonic movements enable an up to 9 times better cleaning in interdental spaces.\*

The longer smooth-as-silk interdental filaments clean deeply in the interdental spaces, the shorter cleaning filaments thoroughly remove plaque from tooth surfaces.

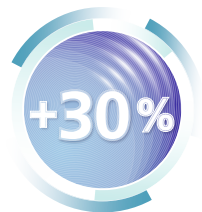

\* in comparison to conventional manual toothbrushes (ADA toothbrush)
